

A useful fly trap

So many diseases can be spread by flies that an effective and practical fly trap would be very useful.

Meegan and Morley have designed a simple trap which can catch 200–300 flies a day and is made out of plastic bottles.

The lower bottle is painted with a dark paint to keep out the light and two entry holes are cut near the base. Some smelly bait to attract the flies is placed in the base. Goat droppings are suggested. The upper bottle has the base cut off and is pushed firmly onto the lower bottle. Cut out a piece of square plastic from another bottle, roll it into a tube and push it into the top of the lower bottle to connect the two. Hang the trap up. Flies will enter through the base, feed on the bait and then fly towards the light and become trapped. Once the flies are dead, simply open the trap, shake them out (for chickens to eat!) and reassemble.

Avoid traps in your life

Traps work because they don't "look" like traps -- the one being trapped doesn't realize it's a trap. So be on your guard at all times.

Proverbs 4:23

Guard your heart above all else, for it determines the course of your life. (NLT)

Proverbs 29:6

Evil people are trapped by sin, but the righteous escape, shouting for joy. (NLT)
